ECO-FRIENDLY POLYURETHANE

Sustainability

40% RENEWABLE RAW MATERIALS
CERTIFIED „CARBON NEUTRAL PRODUCT“

Claim

NO USE OF STYRENE
NO USE OF PLASTICISERS

Durability

HIGH ABRASION RESISTANCE
RELIABLE QUALITY

Reduction

THINNER WALL THICKNESS
MATERIAL SAVING

Less CO₂ emission

LESS WASTE
LESS WEIGHT

allHOLDS
SUSTAINABILITY.
QUALITY. VARIETY.

Variety THROUGH INDEPENDENT CLIMBING HOLDS PRODUCERS

The allHOLDS network consists of independent producers of climbing holds and a polyurethane manufacturer who are working on the development of a polyurethane-based material tailored to their needs. The members of the network share the vision of offering a wide variety of individual holds made from a high-quality and sustainable material.

With the help of the network, a polyurethane-based material has been developed that meets all the properties required for a durable climbing grip. In addition to the synergies of material development, new productivity approaches are constantly emerging from which members benefit in order to be competitive in the long term.

The network members are regularly in contact and exchange ideas on topics such as optimising the production of climbing holds or material properties. Each member can contribute their requirements for the material and its further development. New developments are immediately checked by the professionals and tested in practice. This is how we ensure that our material offers all other relevant properties in addition to sustainability.

The allHOLDS network wants to grow further and is open for new members. In addition to climbing grip manufacturers, other representatives of the climbing community, such as routesetters, climbing gym operators etc. who share our vision, are also welcome. Please feel free to contact us!
